uHunt

hunt problems that matter

uHunt is a complementary tool for UVa online-judge that keeps statistics, provide selections of problems to solve, and exposes a web API for other web developers to build upon it. See a brief history of uHunt.

To submit your solution, use UVa Quick Submit.

Competitive Programming Exercises

FB Page | Info | Buy
Edition: **1st**, **2nd**, **3rd**

Steven Halim and I published the Competitive Programming book which is targetted to help regular computer science students to quickly get up and running for the ACM ICPC as well as IOI. The book discusses the types of problems that are frequently occurs in programming contests. The exercises have been integrated to this uHunt tool so that you can keep track of your progress. To get started, select a chapter from the table on the right. Each chapter has starred problems (i.e., a must try problem). Happy solving :)

3rd Edition's Exercises (switch to: **1st**, **2nd**, **3rd**)

Book Chapters	Starred ★	ALL
1. Introduction	15%	20%
2. Data Structures and Libraries	0%	0%
3. Problem Solving Paradigms	0%	0%
4. Graph	0%	0%
5. Mathematics	5%	6%
6. String Processing	0%	0%
7. (Computational) Geometry	0%	1%
8. More Advanced Topics	0%	0%
9. Rare Topics	0%	0%

Next Problems to Solve

You can view your unsolved/solved problems, sort them, filter by volume, etc. If you just want to solve as many problems as quickly as possible, it's convinient to pick problems according to the **dacu** (distinct accepted users) in descending order. The bigger the **dacu** the easier the problem should be and the more probable it will appear in the UVa discussion board.

World Ranklist

Below is the Author Ranklist (it is a bit different in the sorting order: ac, nos instead of ac, tried, nos). The additional columns: "2d, 7d, 31d" represents the number of (distinct) solved problems in the past 2 days, 7 days, 31 days.

World Ranklist Show: above [10 | 20 | 50 | 100]; below [10 | 20 | 50 | 100]

Statistics Comparer

It is good to have partners (or rivals) in any competitions. Rivals can give you strong motivations to improve yourself. One of the motivations can be: "to solve any problem that your rivals solves, just to stay ahead from your rivals :)".

Using set manipulations you can merge your statistics with your partners and compare it with other groups of rivals :D interesting, isn't it? See the following examples. Later on, the variables A,B,C,D,E should be replaced by the usernames of the users.

- To know what are the the problems you (A) have solved but your rivals (B,C,D,E) do not, execute the following set operation: **A-B-C-D-E** or **A-(B+C+D+E)**.
- Suppose you and your partners form a group (A,C) and your rivals form another group (B,E). To see what problems that your group hasn't solved but your rival has, execute this set operation: **(A+C)-(B+E)**.
- Now if you want to know what are the problems that your group and your rivals have not solved, there is a special set **S** which contains all problems in UVa. So you can do set operation: **S-(A+C)-(B+E)** or **S-(A+C+B+E)** or **S-A-C-B-E**.
- There are other special sets: **cp3** and **cp3s** which contains all problems in the 3rd edition Competitive Programming book and the starred only. For the 1st and 2nd edition exercises, change the number accordingly (cp1, cp1s, cp2, cp2s).

The available operators are: union **+**, subtraction **-**, intersection **&**, and brackets **( )** to force operator precedence.

Expression: felix_halim - R@k!b Compare Clear

Web API - Build Your Own Tool

I have published **a Web API** for acquiring real-time UVa statistics. Please subscribe to **uhunt-api mailing list** to receive updates and discuss about the API. You are free to use the API to build your own statistical tools. Let me know if you have build a great tool based on this API. I will add your tool to the list below:

- **uHunt Components** - demonstrates how the API can be used to build uHunt website (see series.html for building the training series).
- **UVa Arena** by সুদীপ্ত চন্দ্র (dipu_sust)
- **UVa Management Tool** and **Chrome Extension** by Lâm Phan Việt
- **UVa Command Line Tool** by Bao Hong Tan
- **Programming Practice Center** by Andrés Felipe Pineda
- Windows Phone App: **UVa Tools** by Héctor Galindo
- Windows Phone App: **UVa Stats** by Jonathon Simister.
- Android App: **uHunt** by Kaidul Islam.
- **uHunt wrapper for PHP** by Kaspars.

uHunt Web API Change Log:

- 15 Feb 2015 - Added contests API to list all contests and fetch all past submissions.
- 10 Apr 2014 - Added optional parameter to get the user submissions larger than {min-sid}.
- 25 Jul 2013 - Added problem status (0 = unavailable, 1 = normal, 2 = special judge).
- 21 May 2013 - Added subs-user-last to retrieve last submissions from a specific user.
- 18 May 2013 - Added Competitive Programming Book Exercises API.
- 20 Mar 2013
  Breaking change to the Live Event if there is no event for ~1 minute.
  Added User Ranklist API to get users from a specific rank positions.
- 14 Mar 2013 - Added new problem ranklist API.

Virtual Contests Generator

It is important to measure your performance under contest settings. If you want to solve 5 problems in 3 hours, this tool can help you to measure it. First, pick (using the **problem picker**) a set of unsolved problems (categorized by the difficulty levels). Then set the start date and duration and create a virtual contest using the following generator. If you want compete against shadow contestants from the past UVa contests, you can click the **past contests** and select from one of the past UVa contests. The link to the virtual contest will appear after you generate it (only people that know the link are able to view it).

Contestants UVa IDs: 14942, 18017, 22972, 30959, 31991, 52185, 60556, 67264, 69534, 81816

UVa Problem Numbers: **Problem Picker** | **Past Contests**

Contest Date and Duration: 2020/1/21 hh:mm 9:47 Duration 5h (suffix: **h**=hours, **d**=days, **w**=week)

Generate Virtual Contest

Frequently Asked Questions

- Q: What are the meaning of the colors on some problem numbers?
  A: The problem number will will be colored Red if it was last submitted less than **2 days** ago, Green for less than **1 week** ago, Blue for less than **1 month** ago, Orange if the problem is **not yet Accepted**, otherwise, **Black**. In the ChatBox and in the Live Submissions, some problem numbers will be underlined if you have solved the problem. The **bold problem numbers** in the statistics denotes that the runtime of your submission is equal to the best runtime (rank 1 of that problem).
